EditAny time

Prismav1.31.0April 17, 2019

Breaking Changes

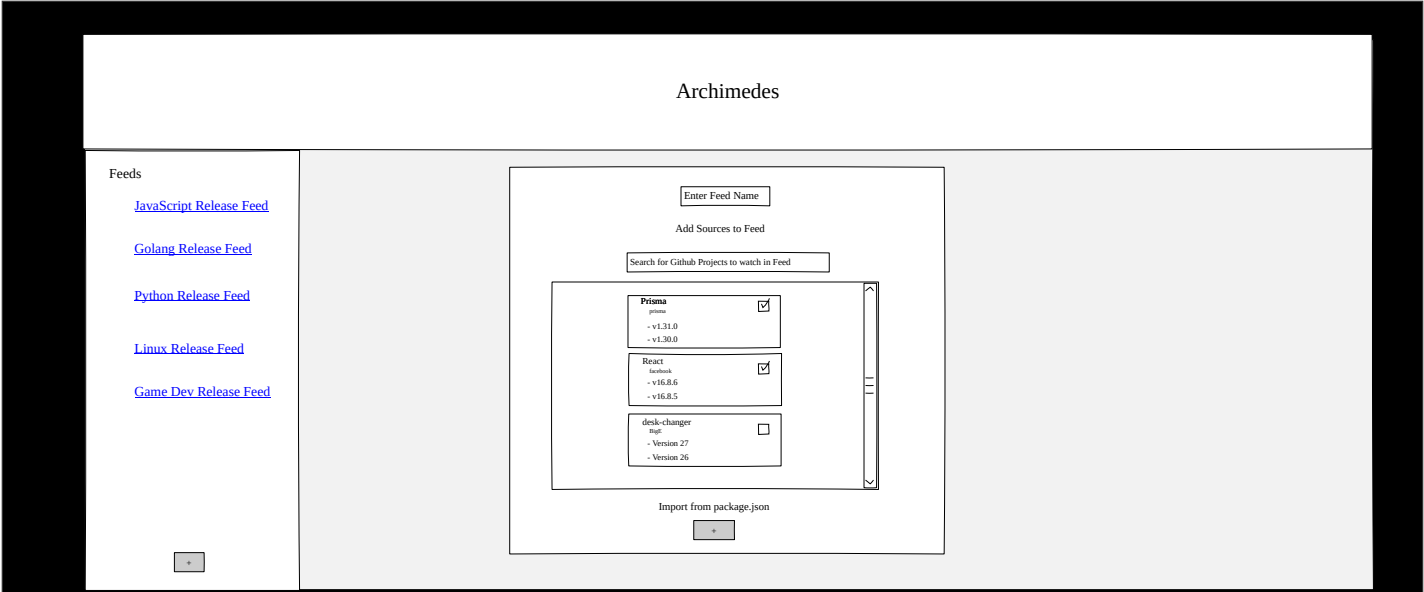

The new datamodel syntax introduced in this release is a breaking change. Read the announcement article or learn how to upgrade to the new datamodel version.

Reactv16.8.6March 27, 2019

React DOM

- Fix an incorrect bailout in `useIsomorphicLayoutEffect` ([@mzucker](#) [v16860](#))

Add/Edit Feeds

The items in the search results area are general examples, rather than examples of what should be in there with the give text. Since it still has the default placeholder text in the real application it would still be empty; that is this is technically not a valid state and is only for design and illustration purposes. Upon reflection, this state might be possible depending on how the "Import from package.json" behavior is designed and implemented.

Clicking the "+" button in the "Import from package.json" section should open the brower's file selection dialog. The user will then select their package.json and it will be parsed and the packages that are found successfully will be displayed as results in the sources box. They will automaatically be checked and added to the feed.
