Goal: Make a new custom release feed.

Visit the homepage

It should be obvious that users ****can**** create new custom release feeds

The user will have to have an account and be logged in to create a release feed

Maybe users can choose to make their release feeds public so they can view anonymously?

Begins the process of creating a new release feed

This can be down by searching for projects on GitHub and adding them

Might also want to support adding from package files like package.json

Selects a name for the feed

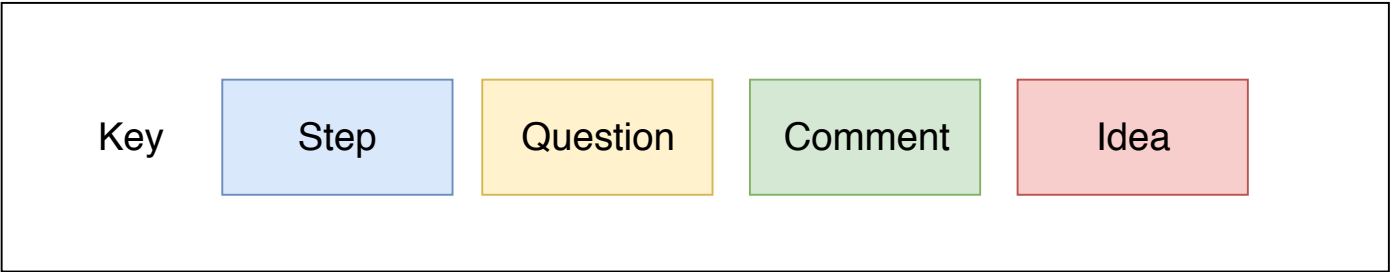

Maybe this can be automatically selected based on the content? If the user doesn't want to choose one.

Selects the items to go into the release feed

They should be able to immediately tell if the project is correct

We can use the GitHub description field for the project here to help describe the project

The feed should save automatically each time it is modified.

Goal: Find and read Prisma's latest change-log.

Visit the homepage

The process should be similar to finding a product on Amazon

Search "Prisma"

The searching capability should have a clear affordance

Select Prisma from the results

I'm feeling lucky?

Sort by Relevance

This should be consistent with the search list for adding to custom feed

Read change-log

Should have an export button
